PROFESSIONAL SUMMARY

Software Developer with 8+ years of production experience in full-stack development, with specialized expertise in PHP/Laravel and Symfony backend architecture. Proven ability to quickly master new technology stacks, demonstrated through hands-on experience with multiple backend frameworks (PHP Laravel/Symfony, Node.js, Python) and frontend technologies (Angular, React, Vue.js, Next.js, TypeScript). Expert in REST API design, database optimization (MySQL, PostgreSQL, MongoDB), microservices architecture, and enterprise-level design patterns including SOLID principles and Repository Patterns. Skilled in unit testing and test-driven development with consistent achievement of 75-80% test coverage throughout the application stack. Experienced in modern DevOps tooling (Docker, CI/CD pipelines, Git, Jira) and delivering GDPR-compliant systems for enterprise environments with 99%+ uptime reliability. Strong track record of measurable impact: migrated PHP monoliths to microservices, raised test coverage significantly, reduced bug regression by 35%, and optimized database queries for high-performance systems handling 500+ concurrent users.

TECHNICAL SKILLS

Backend: PHP 8, Laravel, Symfony, CodeIgniter, Node.js, Python

Frontend: Angular, React, Vue.js, Next.js, TypeScript, JavaScript

Styling: Tailwind CSS, Material UI, CSS/SCSS, Bootstrap, HTML5, Responsive Design

APIs & Architecture: REST, SOAP, JSON, GraphQL, Swagger/OpenAPI, Microservices, MVC, OOP, SOLID Principles, Dependency Injection

Databases: MySQL, PostgreSQL, MariaDB, MongoDB, SQL Server, Query Optimisation, Schema Design, Indexing

DevOps & Tools: Docker, Git, CI/CD (Azure DevOps, GitHub Actions, GitLab), AWS S3, Jira, Linux, PHPStorm

Security & Compliance: Keycloak (RBAC, 2FA), GDPR Compliance, JWT, OAuth2, Session Management

Testing & Quality: Unit & Integration Testing, Component Testing, TDD, Code Review, PHPUnit

Leadership & Soft Skills: Agile / Scrum, Technical Mentoring, Release Management, Resource Allocation

PROFESSIONAL EXPERIENCE

Software Developer Research Information System

09/2024 – Present | Dresden, Germany

IOER - Leibniz Institute of Ecological Urban and Regional Development

- Eliminated 40% of manual processing overhead by digitising research and administrative workflows across 4+ departments delivering custom React and Angular SPAs with shared, reusable component libraries.
- Architected a Laravel service layer using Repository Pattern, Service Classes, and Eloquent ORM, halving onboarding time for new developers by enforcing clean separation of concerns.
- Shipped 10+ versioned RESTful APIs with Form Request validation and structured JSON responses, fully documented in Swagger/OpenAPI enabling seamless integration for 3 partner institutions.
- Accelerated platform response times by 25% by eliminating N+1 queries via eager loading, introducing server-side caching, and applying lazy-loading strategies on the frontend.
- Authored a library of tested Angular components with reactive forms, custom validators, and RxJS data streams standardising UI behaviour and cutting frontend defect rates across all modules.
- Pushed full-stack test coverage from near-zero to 80% with unit, feature, and endpoint tests, establishing test-first practices across backend services and frontend components.
- Sustained 99% uptime on GDPR-compliant systems through Docker-containerised deployments, fully scripted CI/CD pipelines, and rigorous environment config management.

Full Stack Web Developer, LIWETEC GmbH

08/2023 – 07/2024 | Bobingen, Germany

- Spearheaded PHP monolith-to-microservices migration, decomposing legacy Symfony codebase into 6+ services with defined bounded contexts and contracts, reducing release cycles by 30%.
- Scaled the Laravel/Symfony backend to handle 500+ concurrent users by introducing database connection pooling, targeted query optimisation, and Redis caching for high-throughput endpoints.
- Standardised API delivery across 15+ endpoints using Swagger/OpenAPI contracts enforcing versioning, middleware-based authentication, and consistent error structures across all Symfony services.
- Slashed bug regression by 35% by rolling out PHPUnit integration tests, enforcing Symfony dependency injection patterns, and instituting a mandatory peer code review workflow.
- Expanded backend test coverage to 75% with unit, integration, and regression tests spanning all critical business logic and REST endpoints, with every commit triggering a full test run via CI.
- Resolved environment-parity failures by containerising all services with Docker Compose and wiring CI/CD pipelines for zero-downtime releases across every sprint.

Working Student - Full Stack Developer, Bosch Rexroth AG

05/2022 – 06/2023 | Ulm, Germany

- Delivered 3 enterprise Angular + PHP applications used by global engineering teams across multiple countries for internal tooling and data-management workflows.
- Streamlined 50% of manual data entry by integrating REST APIs across multiple internal systems, surfacing consolidated data through Angular frontend components.
- Strengthened release stability by 40% by configuring Azure DevOps CI/CD pipelines that streamlined the full build-test-deploy cycle for both backend and frontend workstreams.
- Protected 500+ user accounts by implementing Keycloak RBAC with mandatory 2FA, fully integrated into the Angular application layer.
- Accelerated API response times by 30% through PHP profiling, MySQL query analysis, and targeted index optimisation.

PHP Backend Developer

09/2016 – 03/2021 | Surat, India

Yanolja Cloud Solution (formerly eZee Technosys Pvt Ltd)

- Owned backend development for a high-traffic hospitality SaaS Channel Manager, connecting 1,000s of hotels to global OTA distribution networks including Booking.com, Expedia, Airbnb, and Agoda.
- Expanded OTA coverage from 10 to 20+ channels by building REST and SOAP API integrations with a two-way sync engine for real-time rates, availability, and reservation updates.
- Engineered a channel mapping engine that normalised hotel inventory into OTA-specific schemas, resolving rate plan variations and channel-specific business rules across all 20+ integrations.
- Processed 10,000+ daily bookings reliably through a centralised reservation ingestion pipeline with built-in deduplication logic and automatic retry on failed OTA responses.
- Decoupled real-time OTA event handling from the main application thread using webhook listeners and async job queues eliminating processing delays on booking confirmations, cancellations, and rate updates.
- Delivered a 30% reduction in query execution time by redesigning MySQL and MongoDB schemas with strategic indexing and query profiling for high-volume transactional workloads.
- Maintained 99.5% platform uptime across peak booking periods by implementing continuous monitoring, structured maintenance windows, and a rapid hotfix deployment process.
- Cut new OTA integration delivery time by 25% by refactoring legacy PHP into clean MVC architecture and introducing reusable channel adapter abstractions.

EDUCATION		
M.Sc. in Automotive Software Engineering , Technische Universität Chemnitz		04/2021 – 03/2023
Master of Computer Applications (MCA) , Savitribai Phule Pune University		06/2013 – 06/2016
• Grade: Outstanding		
Bachelor of Computer Applications (BCA) , Saurashtra University		06/2010 – 06/2013
• Grade: First Class with distinction		

LANGUAGES		
English	German	
Fluent (C1)	Elementary (B1, actively improving)
