PROFESSIONAL SUMMARY

Full Stack Developer with 8+ years of professional experience building scalable web applications across frontend and backend technologies. Strong expertise in JavaScript, TypeScript, Angular and React, with additional experience in Vue.js and Next.js and extensive backend expertise in PHP, Laravel, Symfony and Node.js. Experienced in building responsive single-page applications (SPAs), reusable UI components, RESTful APIs and database-driven systems using MySQL, PostgreSQL, MariaDB and MongoDB. Proven track record of improving application performance, modernising legacy systems, increasing automated test coverage and delivering reliable production applications using Docker and CI/CD. Experienced in AI-assisted software engineering using Claude Code, ChatGPT, OpenAI Codex and GitHub Copilot for codebase analysis, refactoring, debugging, testing and technical documentation.

TECHNICAL SKILLS

Frontend: JavaScript (ES6+), TypeScript, Angular, React, Vue.js, Next.js, RxJS, HTML5, CSS3/SCSS, Tailwind CSS, Bootstrap, Material UI, Responsive Web Development, Single-Page Applications (SPA)

Backend: PHP 8, Laravel, Symfony, CodeIgniter, Node.js, Python, Composer

APIs & Architecture: RESTful APIs, SOAP, GraphQL, JSON, OpenAPI/Swagger, Microservices, MVC, Repository Pattern, Service Layer, Dependency Injection, SOLID Principles, Design Patterns, API Versioning, Webhooks, Asynchronous Processing

AI-Assisted Software Engineering: Claude Code, ChatGPT, OpenAI Codex, GitHub Copilot, Prompt Engineering, Codebase Analysis, Code Generation, Refactoring, Debugging, Test Generation, Technical Documentation

Databases & Performance: MySQL, PostgreSQL, MariaDB, MongoDB, Redis, Database Design, Schema Design, Query Optimisation, Indexing, Connection Pooling, Caching

Security & Authentication: OAuth2, SSO, JWT, Keycloak, RBAC, 2FA, API Authentication, Authorisation, Session Management, GDPR/DSGVO

Testing & Quality: PHPUnit, Unit Testing, Integration Testing, Feature Testing, API Testing, Component Testing, TDD, Code Review, Clean Code

DevOps & Cloud: Linux, Bash/Shell, Nginx, Apache, Docker, Docker Compose, GitLab CI/CD, GitHub Actions, Azure DevOps, Azure Cloud Services, AWS S3, Deployment Automation

Tools & Methods: Git, GitLab, GitHub, PhpStorm, Jira, Agile/Scrum, Software Development Life Cycle (SDLC), Technical Mentoring, Release Management

PROFESSIONAL EXPERIENCE

Software Developer – Research Information System

09/2024 – Present | Dresden, Germany

IOER - Leibniz Institute of Ecological Urban and Regional Development

- Develop and maintain full-stack research and administrative web applications using Angular, React, TypeScript, PHP and Laravel, digitising workflows across 4+ departments.
- Delivered custom React and Angular single-page applications (SPAs) with shared, reusable component libraries for data-driven research and administrative workflows.
- Built reusable Angular components using TypeScript, RxJS, reactive forms and custom validators, standardising UI behaviour and reducing frontend defects across application modules.
- Architected a modular Laravel backend using Service Layer, Repository Pattern and Eloquent ORM, improving separation of concerns and reducing developer onboarding time by 50%.
- Designed and delivered 10+ versioned RESTful APIs using Laravel Form Request validation, structured JSON responses and Swagger/OpenAPI documentation, supporting integrations across three partner institutions.
- Improved application response time by 25% through database query optimisation, eager loading, server-side caching and frontend lazy-loading strategies.
- Increased automated test coverage from near-zero to 80% through unit, feature, endpoint and frontend component testing.
- Own technical architecture and code-quality practices across the application, including code review, REST API standards, testing, performance optimisation and maintainable full-stack application design.
- Apply AI-assisted development workflows using Claude Code, ChatGPT, OpenAI Codex and GitHub Copilot for codebase analysis, implementation support, refactoring, debugging, automated test generation and technical documentation while maintaining manual code review and engineering quality standards.
- Maintain GDPR-compliant production systems through Docker-containerised deployments, CI/CD pipelines and structured environment configuration.

Full Stack Web Developer, LIWETEC GmbH

08/2023 – 07/2024 | Bobingen, Germany

- Developed and maintained full-stack web applications for complex elevator planning, configuration and calculation workflows, combining interactive frontend functionality with PHP/Laravel/Symfony backend services.
- Built data-driven user interfaces with real-time updates, business-rule validation and plausibility checks, integrating frontend workflows with REST APIs and backend services.
- Migrated a legacy PHP/Symfony monolith into 6+ independently structured services with defined interfaces and responsibilities, reducing release cycles by 30%.
- Designed and standardised 15+ RESTful API endpoints using Swagger/OpenAPI contracts, API versioning, middleware-based authentication and consistent error handling.
- Scaled Laravel/Symfony backend services to support 500+ concurrent users through database connection pooling, query optimisation and Redis caching for high-throughput endpoints.
- Reduced bug regression by 35% through PHPUnit integration testing, dependency-injection practices and structured code review, while increasing backend test coverage to 75%.
- Containerised application services with Docker Compose and integrated CI/CD pipelines, improving environment consistency and supporting reliable application releases.
- Contributed across the complete software development lifecycle, including requirements analysis, frontend and backend development, API integration, database optimisation, testing, code review, deployment and technical documentation.

Working Student - Full Stack Developer, Bosch Rexroth AG

05/2022 – 06/2023 | Ulm, Germany

- Delivered three enterprise Angular and PHP applications used by global engineering teams across multiple countries for internal tooling and data-management workflows.
- Developed responsive frontend functionality using Angular, TypeScript and JavaScript for enterprise web applications.
- Built reusable Angular components and integrated REST APIs across multiple internal systems, reducing manual data entry by 50%.
- Implemented authentication, authorisation and role-based access functionality using SSO, JWT and Keycloak, protecting 500+ user accounts with RBAC and 2FA.
- Improved frontend performance through Angular lazy loading and optimised communication between frontend applications and REST APIs.
- Improved API response times by 30% through PHP profiling, MySQL query analysis and targeted database index optimisation.
- Strengthened release stability by 40% by configuring Azure DevOps CI/CD pipelines to automate build, testing and deployment processes.
- Contributed across frontend development, backend development, REST API integration, database optimisation, testing and deployment.

PHP Backend Developer

09/2016 – 03/2021 | Surat, India

Yanolja Cloud Solution (formerly eZee Technosys Pvt Ltd)

- Developed and maintained a high-traffic hospitality SaaS Channel Manager connecting thousands of hotels with global OTA platforms including Booking.com, Expedia, Airbnb and Agoda.
- Expanded OTA coverage from 10 to 20+ channels by developing REST and SOAP API integrations with two-way synchronisation for real-time rates, availability and reservation updates.
- Engineered a channel mapping system that normalised hotel inventory into OTA-specific schemas and handled rate-plan variations and channel-specific business rules across 20+ integrations.
- Processed 10,000+ daily bookings through a centralised reservation ingestion pipeline with deduplication logic and automatic retry handling for failed OTA responses.
- Implemented webhook listeners and asynchronous job processing for real-time booking confirmations, cancellations, inventory changes and rate updates.
- Reduced query execution time by 30% by optimising MySQL and MongoDB schemas through strategic indexing and query profiling for high-volume transactional workloads.
- Maintained 99.5% platform uptime during peak booking periods through continuous monitoring, structured maintenance and rapid hotfix deployment.
- Reduced new OTA integration delivery time by 25% by refactoring legacy PHP applications into clean MVC architecture and introducing reusable channel adapter abstractions.

EDUCATION

M.Sc. in Automotive Software Engineering

04/2021 – 03/2023 | Chemnitz, Germany

Technische Universität Chemnitz

Master of Computer Applications (MCA), Savitribai Phule Pune University

06/2013 – 06/2016 | Pune, India

Bachelor of Computer Applications (BCA), Saurashtra University

06/2010 – 06/2013 | Rajkot, India

LANGUAGES

English

Fluent (C1)

German

A2 (currently improving toward B1)
